A LIVING WORLD FOR BOOKS

BOOOKS

Boooks is an offline-first social reading platform where your books become part of a personal, explorable 3D world.

BOOKS SHOULD FEEL PERSONAL

Digital libraries are efficient, but they rarely feel like they belong to us.

They reduce books to rows, thumbnails and files, even though every book carries a memory, a place and a piece of who we are.

Boooks is designed to bring that feeling back.

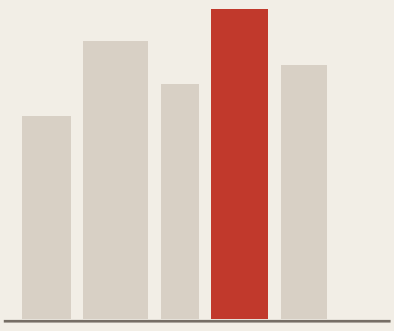

YOUR READING WORLD

Your library becomes a world you can explore.

Books sit on shelves, respond to touch and slowly build a visible picture of your reading life.

The goal is not to imitate a physical bookshelf perfectly. It is to create something more personal, playful and alive.

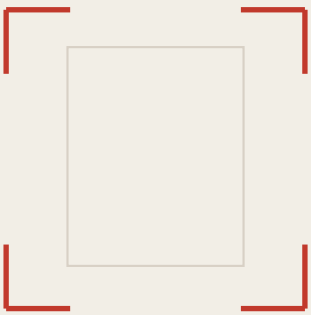

BRING YOUR BOOKS WITH YOU

Scan the front, spine and back of a book.

Boooks identifies the book, prepares its cover and creates a digital 3D version for your library.

A physical collection can gradually become a portable reading world, one book at a time.

READ YOUR WAY

Open a book directly from its 3D form.

Read offline, change the typography, save bookmarks, highlight passages and attach personal notes.

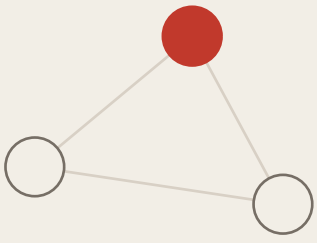

The reading experience is designed to remain calm and focused while the surrounding world makes returning feel inviting.

READING CAN BE SOCIAL

Discover what friends are reading.

Share books, collections, progress and meaningful passages without turning reading into another noisy feed.

Boooks is built around curiosity and thoughtful connection, not endless engagement.

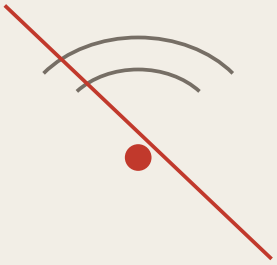

OFFLINE FIRST

Your library should remain yours, even without a connection.

Books, progress, notes and essential features are stored locally first and synchronised when a connection becomes available.

Fast when online. Useful when offline. Personal by default.

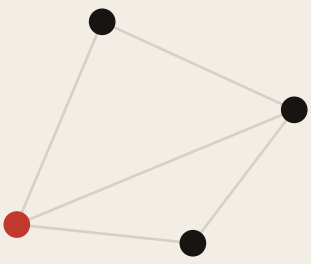

AN OPEN FOUNDATION FOR BOOKS

Behind the experience, Boooks is exploring an open, distributed record for books.

This foundation can preserve a book's identity, editions, contributions and history across time, while keeping the complexity away from the reader.

The technology supports the world. It is not the world itself.

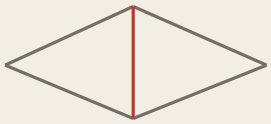

BUILT FOR LEARNING TOO

Boooks will be tested with schools and readers in real learning environments.

A spatial library can help students see progress, revisit highlights and develop reading as a daily habit and part of their identity.

The aim is not only to provide access to books, but to make people want to return to them.

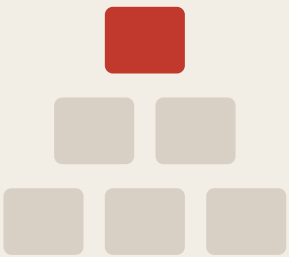

CURRENTLY IN DEVELOPMENT

Boooks is being built with React, React Three Fiber and Three.js.

Current work includes the 3D library, book scanner, reader, offline storage, social features and the infrastructure behind a shared book ecosystem.

It is early, but it is becoming a real application.

HELP BUILD THE WORLD AROUND READING

Boooks is looking for early readers, schools, designers, developers and curious people who want to contribute.
